

# SDT-151 DRIVING SIMULATOR SYSTEM

This portable driving simulator is controlled by a unique mini-car interior, which has a steering wheel, 5-speed gear lever, handbrake, foot pedals (clutch, brake and accelerator), ignition key, indicator stalk, wiper stalk and horn. The simulator comes with software, so the user only needs to plug into an existing computer or laptop and slide a seat up to the controls and away you go.

- ✓ **Pre-learner Training (before in-car driving lessons, students can learn the controls)**
- ✓ **Use in school to compliment or commence driver-ed classes**
- ✓ **Use at company safety events to demonstrate bad driving (texting or with beer goggles)**

The simulator unit and software is setup for Right Hand Drive. It includes Learner Driver modules for gear-changing, hill start, reverse parking, cornering and mud driving. There are also scenarios for driving in heavy rain, mountains and snow plus a severe module with hazards requiring evasive response. Included is a left-hand drive test for practicing to drive on the other side of the road (before travel to China, USA). Choose from 4 vehicles which can be driven as manual or automatic. There is a reporting screen for each module and a unique replay function for analysis and driver feedback.

## ADVANTAGES:

- ✓ **Low cost (rent or purchase)**
- ✓ **Portable (with optional case)**
- ✓ **Learn the controls of a car**
- ✓ **Many scenarios with feedback**
- ✓ **Good for introductory training**
- ✓ **Can be used with racing games**

**Frame:** Metal and Plastic construction with height adjustable steering column  
The simulator is supplied assembled

**Hardware:** Buyer needs own screen, computer, table and chair.  
Minimum system requirements are:

- RAM above 1GB (2GB is recommended)
